

Tool-Vu/Cable-Cam Video Inspection System

Confined Space Viewing with the Tool-Vu/Cable-Cam

The Tool-Vu/Cable-Cam's probing ability can reach deep into shafts, ducts, pipes and any confined spaces to monitor, work or seek out obstructions or problems. The Tool-Vu/Cable Cam is unmatched by any other technology. When you need to go deep, go with the Tool-Vu/Cable-Cam.

The Tool-Vu/Cable-Cam camera can be clamped to a plumbers snake, electricians fish tape or extendable fiberglass poles for lowering the Cable-Cam into shafts, mechanical shafts, ducts pipes and any confined space to make full viewing possible.

The versatility of the Cable-Cam can be an invaluable tool in many instances—for industrial inspections of machinery and pipe; for building inspection and maintenance of plumbing pneumatic tube system pipe and wiring in ceilings areas, crawl spaces or even underground; for search and rescue missions; and even for vehicle and aviation inspection

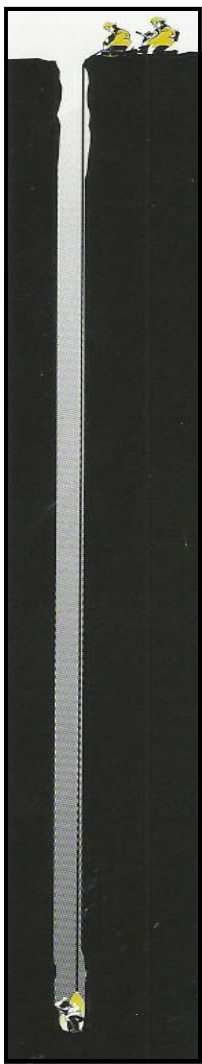

1 1/2" Camera & Light Ring

This 1 1/2" waterproof camera is standard for the new Tool-Vu/Cable-Cam along with the custom designed light ring with 15 super-bright LED's that provide adequate lighting in any dark situation. This lighting situation will allow you to light up an area 20 ft. by 30 ft. down to a 2 in. pipe with ease.

Variable Intensity White Lights

Rheostat controlled white lights can be dimmed or brightened for whatever the situation calls for. Our 15 LED White light Board emits on a 22° angle to eliminate problems with particle reflection.

By lowering the Cable-Cam into a shaft, duct or pipe assessment can begin immediately.

The Tool-Vu/Cable-Cam System is ideal for quick inspections in those "can't see" problem areas where one's head doesn't fit or a person cannot physically get to. (As in the shaft or duct inspections on the left and below).

Tool-Vu Video Capture Kit
The Tool-Vu/Cable-Cam Video Capture Software makes it possible to:

- Create a capture file and save a video or snap image.
- E-mail pictures to a manufacturer for warranty, job bidding or trouble shooting.
- Connect to output sources via the USB to RCA cable included in the kit.

The Tool-Vu/Cable-Cam Video Inspection System includes:

- 4" Black & White CRT Tool-Vu Monitor / 12 VDC Battery (which sits in the base of the monitor unit) / Battery Charger / Sun Shield / 16" x 16" x 11" Hard Carrying Case.
- Custom design metal spool allows for easy spooling and unspooling on the self cleaning roller bearings and provides rugged and fail-safe storage for the 300' of video cable and camera.
